Practice 1: Build Your Startup Waiting-List Landing Page

Use AI with **v0.app** to turn your startup concept into a functional public prototype.

1 Adapt the prompt

Create a modern, responsive landing page for your startup with an email-only waiting list.

WAITING LIST Visitors can register with their email.

COUNTER Show the number of registered users on the homepage.

DATA Add /waitinglist and allow the emails to be downloaded in Excel-compatible format.

PERSISTENCE Registrations must remain after refreshing the page.

Project information to include

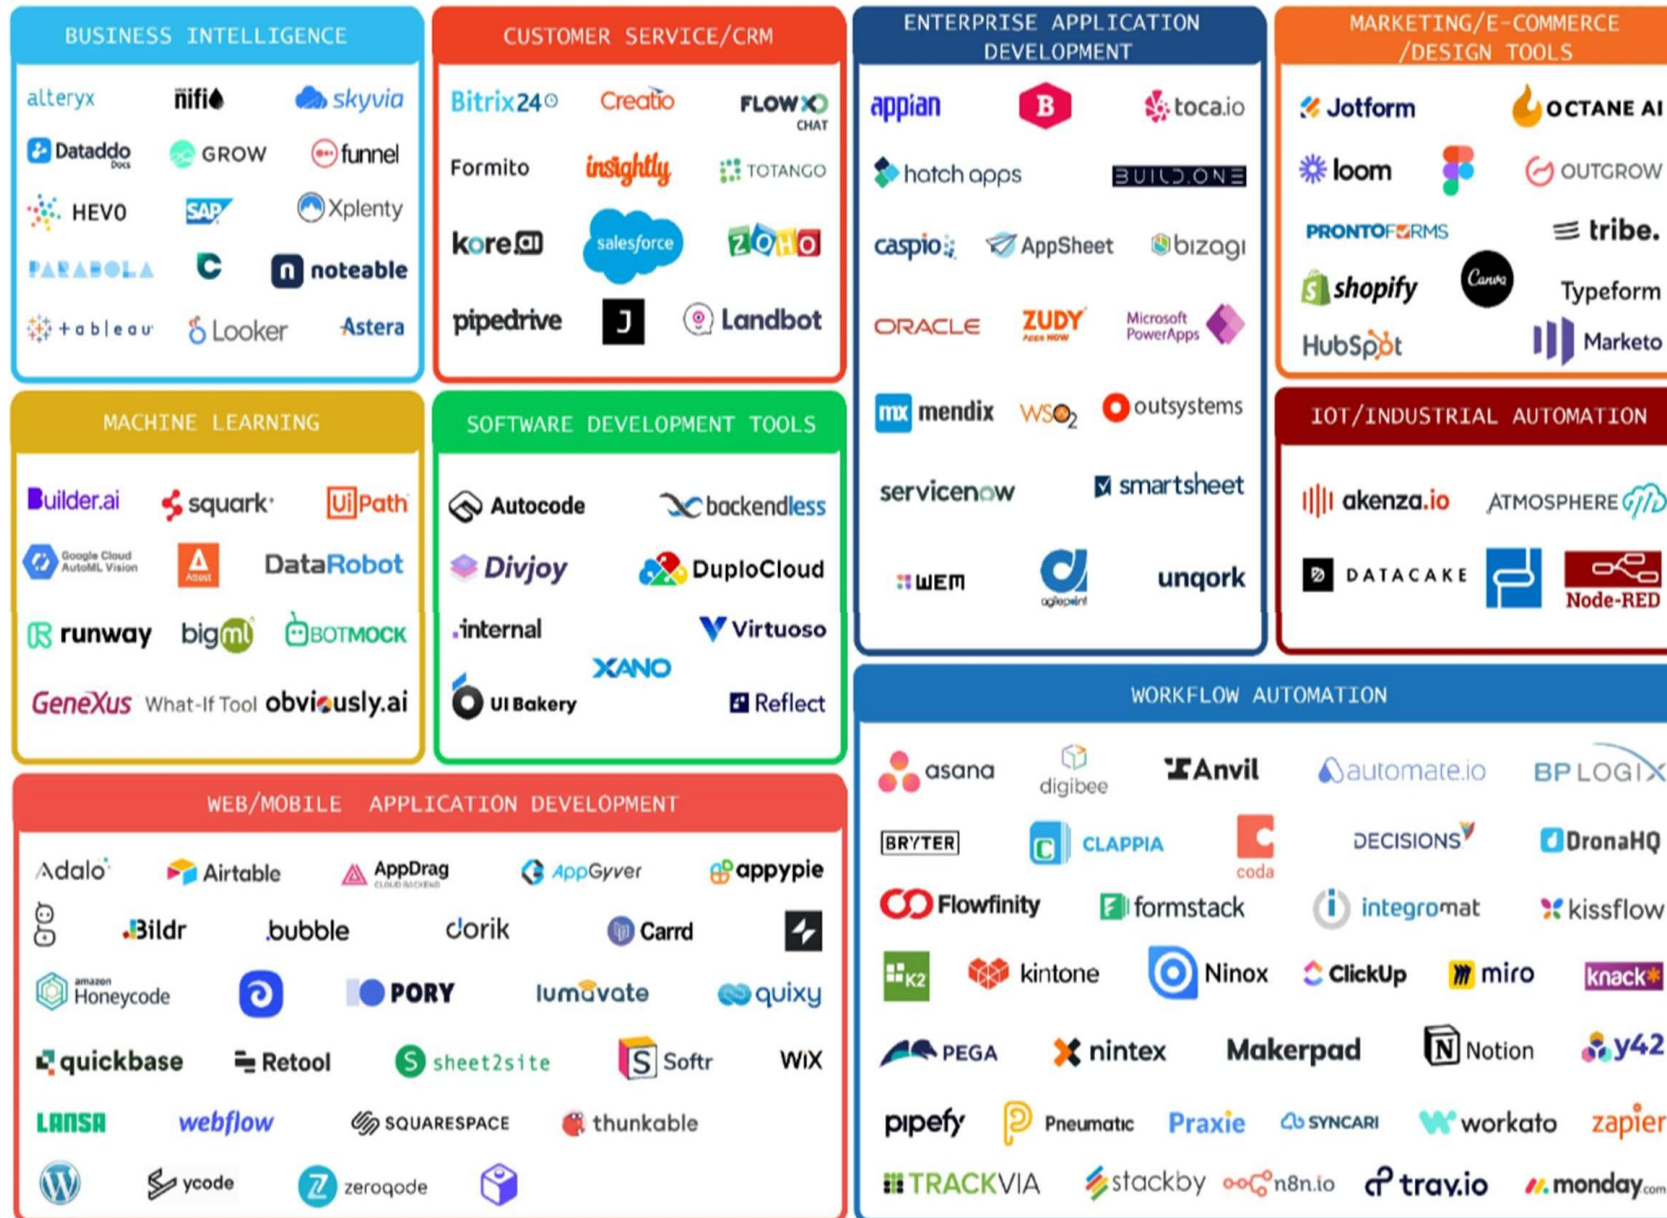

Startup name • Description / value proposition • Target users • Call to action • Layout, colors & visual style

2 Build, test & publish

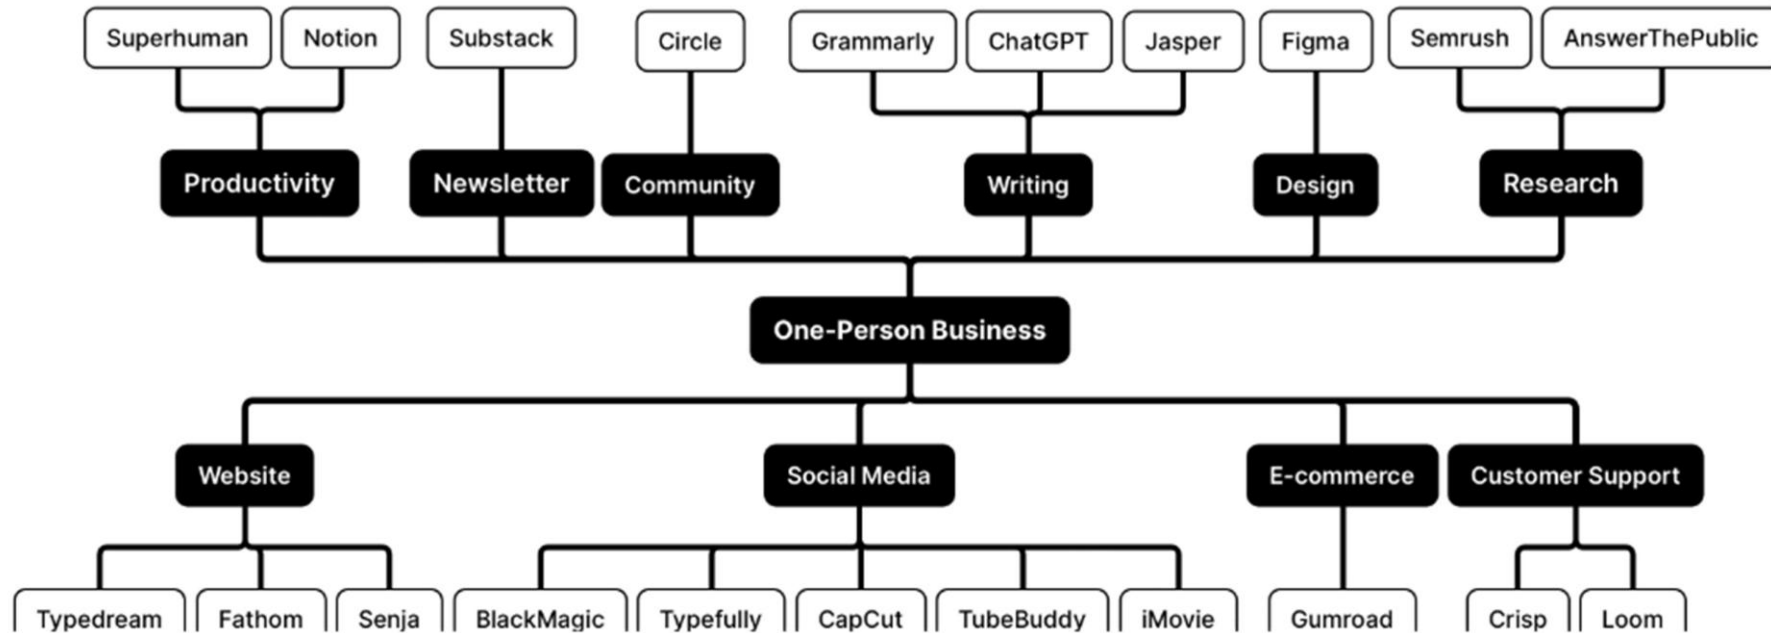

- 1 OPEN**
Go to v0.app
- 2 BUILD**
Generate the site and iterate
- 3 PUBLISH**
Deploy in Public Mode
- 4 TEST**
Join with a test email
- 5 VERIFY**
Download /waitinglist and confirm the email is there

SUBMIT: the public deployed URL – not the v0 editor/project link

Mobile App Creation – Flutter Flow

Series | To Do App

Introduction

UI • Widgets • Actions

Low Code & RPA

The image displays the Make.com (formerly Integromat) interface, which is a visual programming tool for automating workflows. The background is a vibrant purple. In the top left corner, the 'make' logo is visible. A user profile for 'Jonathan Simons' is shown in the top right. The central workspace features a workflow diagram with the following steps: 1. 'Watch responses' (Typeform icon), 2. 'Transform' (green circle with a stylized 'S'), 3. 'Create a lead record' (Salesforce icon), and 4. 'Add leads to a list' (Make icon). A 'Run once' button is located at the bottom left of the workflow area. On the left side of the workspace, there is a vertical toolbar with various icons for adding modules and managing the workflow. A large white text overlay on the left side of the image reads 'What is Make?'.

What is Make?

Practice 2: Create a Jingle for Your Startup with Suno AI

Use AI + Suno to turn your startup idea into a memorable piece of music.

1 Adapt the prompt

Create a short, memorable jingle for your startup. The music and lyrics should communicate the brand and value proposition clearly.

JINGLE Aim for a catchy 20–45 second song that people can remember after one listen.

LYRICS Use your startup name, problem/value proposition, and a clear brand message.

MUSIC Choose a genre, mood, tempo, instruments, and vocal style that fit your target users.

IDENTITY Reflect the personality of the startup: playful, premium, bold, trustworthy, etc.

Project information to include

Startup name • Value proposition • Target users • Brand personality • Musical style / mood

2 Create, iterate & share

1 **OPEN**

Go to Suno AI

2 **PROMPT**

Enter your adapted prompt

3 **CREATE**

Generate the jingle

4 **ITERATE**

Refine lyrics, genre, mood & sound

5 **SHARE**

Copy the public song link

SUBMIT: the public Suno link to your jingle
